(54) Title: ALPHA 4 BETA 2 DELTA GABA-A RECEPTORS AS A STRATEGY FOR PMS AND ALCOHOLISM

(57) Abstract: The present invention is directed to a screening mechanism for identifying members of the general population at increased risk for alcoholism and premenstrual syndrome. The screening mechanisms may be used to measure the expression of the $\alpha_4\beta_2\delta$ GABA_A receptors, in order to identify members of the general population as having an increased sensitivity to lower concentrations alcohol coupled with a decrease sensitivity to higher concentrations of alcohol, a scenario frequently found in patients suffering from alcoholism and premenstrual anxiety. Methods of screening for drugs which decrease expression of the $\alpha_4\beta_2\delta$ subunit of GABA_A are also provided.
